

NEWS RELEASE

BUREAU OF LABOR STATISTICS
U. S. DEPARTMENT OF LABOR

For Release: Wednesday, February 15, 2017

17-249-PHI

MID-ATLANTIC INFORMATION OFFICE: Philadelphia, Pa.

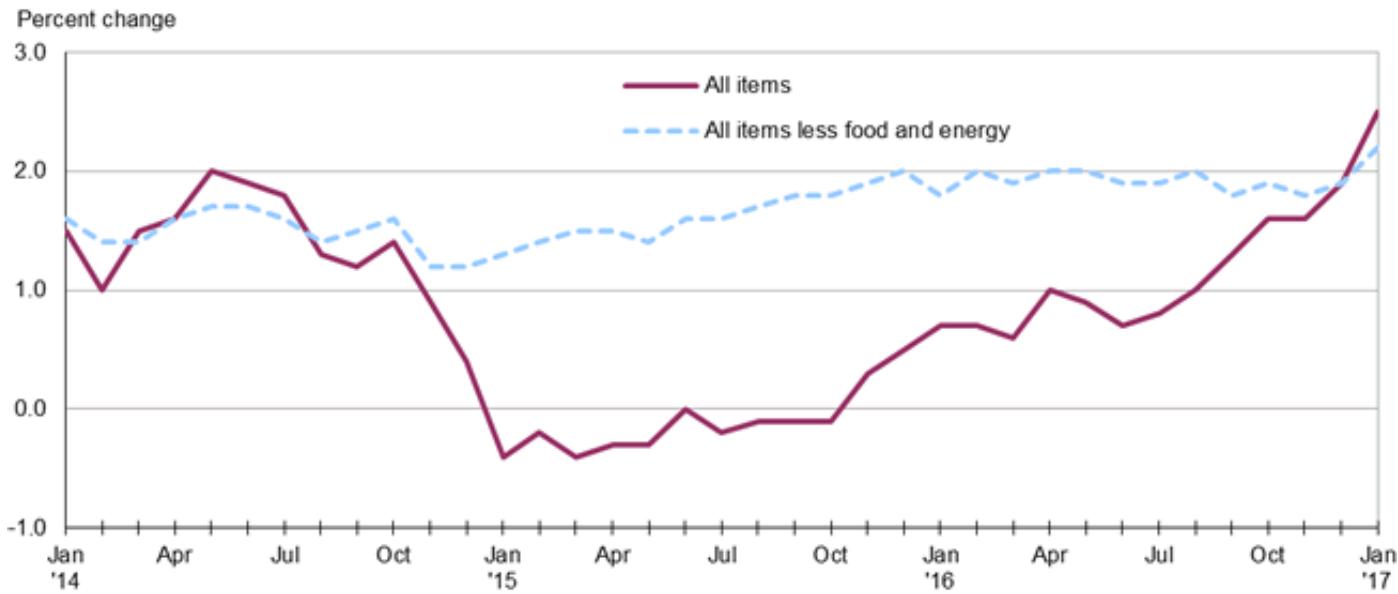

Technical information: (215) 597-3282 BLSInfoPhiladelphia@bls.gov www.bls.gov/regions/mid-atlantic
Media contact: (215) 861-5600 BLSMediaPhiladelphia@bls.gov

Consumer Price Index, Northeast Region – January 2017 Regional prices up 0.6 over the month and 2.5 percent over the year

The Consumer Price Index for All Urban Consumers (CPI-U) in the Northeast increased 0.6 percent in January, the U.S. Bureau of Labor Statistics reported today. Sheila Watkins, the Bureau's Regional Commissioner, noted that the recent increase was due mostly to a 0.4-percent increase in the all items less food and energy index and a 3.5-percent advance in the energy index. The food index also rose over the month, up 0.6 percent. (Data in this report are not seasonally adjusted. Accordingly, month-to-month changes may reflect the impact of seasonal influences.)

Over the last 12 months, the Northeast all items CPI-U increased 2.5 percent, due largely to a 2.2-percent advance in the all items less food and energy index. (See [chart 1](#) and [table A](#).) The energy index also increased, up 12.1 percent, while the food index edged down 0.2 percent. (See [table 1](#).)

Chart 1. Over-the-year percent change in CPI-U, Northeast region, January 2014–January 2017

Source: U.S. Bureau of Labor Statistics.

Food

The food index increased 0.6 percent since December. Prices for both food at home and food away from home increased over the month, up 0.8 and 0.3 percent, respectively.

From January 2016 to January 2017, the food index edged down 0.2 percent, as a 1.9-percent decrease in prices for food at home was nearly offset by a 2.3-percent increase in those for food away from home.

Energy

The energy index, which includes prices for household and transportation fuels, increased 3.5 percent since December, led by a 5.4-percent rise in gasoline prices. Prices for electricity and utility (piped) gas service also increased over the month, up 1.6 and 3.3 percent, respectively.

The energy index increased 12.1 percent since January 2016. The increase was led by a 23.4-percent jump in gasoline prices, the largest over-the-year increase in this index since October 2011. Prices also increased over the year for utility (piped) gas service (13.5 percent), while those for electricity declined (-0.5 percent).

All items less food and energy

The index for all items less food and energy rose 0.4 percent over the month, mostly due to an increase in apparel prices (2.8 percent). Prices for medical care also rose, up 0.6 percent over the month. These and other increases were moderated by a 0.2-percent decrease in used cars and trucks prices.

The index for all items less food and energy increased 2.2 percent since January 2016, led by higher prices for shelter (3.2 percent). Prices were also higher over the year for several other categories including medical care (3.5 percent).

The Consumer Price Index for February 2017 is scheduled to be released Wednesday, March 15, 2017, at 8:30 a.m. (ET).

Technical Note

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 89 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers approximately 28 percent of

the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 87 urban areas across the country from about 4,000 housing units and approximately 26,000 retail establishments--department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date (1982-84) that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65. For further details see the CPI home page on the Internet at www.bls.gov/cpi and the BLS Handbook of Methods, Chapter 17, The Consumer Price Index, available on the Internet at www.bls.gov/opub/hom/pdf/homch17.pdf.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. **Note: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.**

The Northeast region is comprised of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Footnotes (1) This index series was calculated using a Laspeyres estimator. All other item stratum index series were calculated using a geometric means estimator.

(2) Indexes on a December 1982=100 base.

(3) Indexes on a December 1997=100 base.

(4) Special index based on a substantially smaller sample.

(5) Indexes on a December 1993=100 base.

Note: Index applies to a month as a whole, not to any specific date.
